

GPS Time & Attendance Tracking

At DND we know that tracking accurate time and attendance can be challenging. For caregivers that are using the DND mobile web app on a GPS capable device, location coordinates can be captured as soon as a caregiver arrives at a patient's location.

The road to GPS Time & Attendance starts here.

Accuracy

GPS coordinates are captured each time a caregiver verifies their attendance at a patient location.*

Alerts

Administrators can be notified immediately if a visit is started or ended outside of preset allowable GPS coordinates. In addition, detailed reports regarding out of range visits may be accessed at any time.

Intuitive Operation

With two taps of a finger a caregiver's time and attendance is verified. Simply start a visit from the mobile web app and choose the GPS verification option.*

Universal Technology

GPS technology is available on nearly any brand of smart phone. If your caregivers have a smart phone then they have GPS.

*GPS accuracy may be affected by a number of factors including atmospheric conditions, satellite positions, natural barriers, and buildings. For these reasons if you encounter GPS accuracy issues we recommend verifying your location outdoors prior to entering a patient's location.
