

Near Field Communication (NFC) & Bluetooth Technology

For caregivers using the DND mobile web app, time and attendance can easily be verified at a client location that has an active DND NFC/Bluetooth tag. If using an Android device, verify attendance using NFC technology. If using an iOS device, verify attendance using Bluetooth technology. **The ease of use and accuracy of NFC and Bluetooth technology makes it an ideal choice for "proof of presence" for home care.**

Security

Encrypted data changes with every tap thus prohibiting attempts to share, clone or manipulate tags for nefarious reasons.

Frictionless Operations

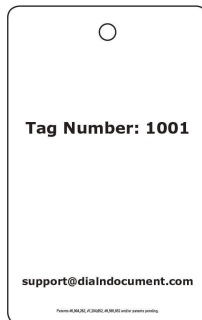

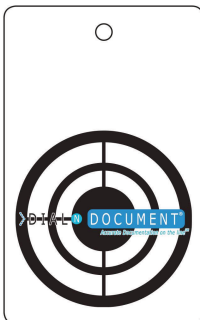

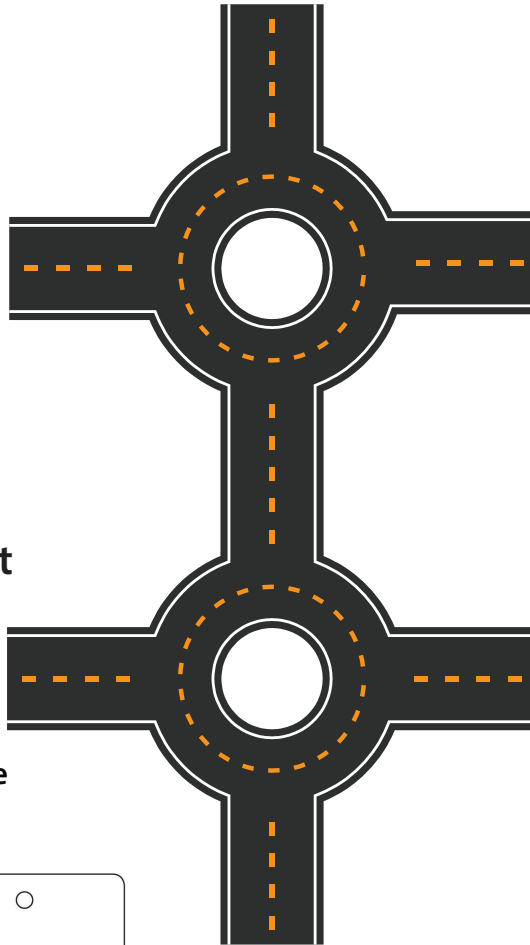

To verify attendance simply tap a tag with an Android device (NFC). Or stand within a few feet with an iOS device (Bluetooth).

Streamlined Deployment

For Android/NFC no proprietary software or special tag readers are needed. For iOS/Bluetooth one additional free application will run in the background of the device.

Enhanced Analytics

Tags provide real-time access to precise data, as well as reliable audit trails.
